

Idesco ID: Enterprise Level

Start using mobile phones in access control

Idesco ID service is a fast and easy solution to deploy mobile access. Idesco ID Enterprise Level is ideal for your organisation if you need to create and administer users' mobile credentials 24/7. Idesco ID Enterprise Level gives you two ways to choose from. We can create your Idesco Portal customer account, from where you can distribute mobile credentials; either in large numbers simultaneously, or one by one. Alternatively, connect Idesco ID's service to your own solution via convenient REST API integration. Either way, your users will be notified on their phones and register themselves with instructions you send them, making their phone ready to provide access. Neither option - Idesco Portal nor REST API integration - becomes part of your access control system and will not store user's data.

- Ongoing administration of user and credential data in your own access control (or other) system
- Full (24/7/365) integration, both seamless and secure, built upon a technology-independent interface
- Make phone registration easier for your users by customizing their notifications (SMS and/or email)
- Free Idesco ID mobile app (Android/iOS) can also host multiple credentials for different systems
- Idesco Portal quickly distributes mobile IDs to your users - all from your own, user-friendly customer account
- An available SDK lets you conveniently extend Idesco ID support to your own app

What is needed?

Customer account and integration to system	In the customer account, one specifies data needed for transferring mobile credentials Idesco ID API documentation for integration available. Idesco ID test environment available
Compatible RFID reader	8 CD 2.0 MI
Mobile phone app	Idesco ID (Google Play or AppStore)
